

Automation Systems and Solutions (India) Pvt. Ltd.

Integrators of Electronic Security Systems

India's Trusted **Security** Infrastructure Partner

Established in 2009, Automation Systems and Solutions (India) Pvt. Ltd. (ASSIPL) is a specialized system integrator delivering robust Electronic Security and Safety frameworks. We possess the institutional capacity and operational expertise to execute large-scale, nationwide deployments seamlessly.

We deliver end-to-end operational readiness, from initial blueprinting to long-term lifecycle maintenance, ASSIPL protects the physical and digital assets of India's most demanding sectors.

The ASSIPL Benchmark

**15+ Years of Integration
Excellence**

**3000+ Projects Delivered
Successfully**

**ISO 9001:2015 Certified
Quality Management**

**Pan-India Operational
Reach**

Why **Enterprise Leaders** Choose ASSIPL

End-to-End Accountability

We manage the entire SITC pipeline (Supply, Installation, Testing, and Commissioning) internally, ensuring smooth execution and acting as your single point of accountability.

Pan-India Standardization

We manage security rollout across hundreds of regional projects. Our centralized project management and local service hubs ensure the installation quality is uniform across projects.

Premier Banking Expertise

We are trusted implicitly by India's largest financial institutions. We specialize in hardening restricted environments, from high-security property vaults to currency chests, ensuring strict regulatory compliance.

Factory-Trained Engineers

Our field technicians are trained directly by global technology leaders. We deploy, diagnose, and maintain complex architectures efficiently.

Strategic OEM Partners

Powered by the world's leading manufacturers:

Comprehensive **Security** Architectures

01 **Video Surveillance – STQC Compliant Solutions**

STQC-compliant IP CCTV solutions for enterprise and critical infrastructure deployments.

- High-definition indoor and rugged outdoor IP CCTV arrays.
- AI-driven motion tracking, geofencing, and facial recognition.
- Centralized Command & Control Centre, VMS integration.

02 **Advanced Access Control Systems**

Secure physical and digital governance to eliminate unauthorized access.

- Touchless Biometric Verification and facial recognition.
- Encrypted proximity and smart card readers.
- Cloud-based time, attendance, and multi-site access management.

03 **Fire Detection System**

Rapid-response environmental monitoring for strict regulatory compliance.

- High-intelligence addressable fire alarm systems for exact threat pinpointing.
- Integrated voice evacuation and emergency audio networks.
- Reliable fire detection system for critical infrastructures.

Core **Enterprise Solutions**

04 **Intrusion Detection Systems**

Multi-tiered perimeter and core boundary networks.

- Active seismic vault vibration and break-glass detection for high-security areas.
- Hardwired intrusion and physical alert systems for restricted and critical assets.
- Perimeter intrusion detection and virtual geofencing for early threat detection and alert generation.

05 **Gate Automation & Control Barriers**

Heavy-duty physical security managing high-volume logistics.

- High-speed motorized flap barriers for corporate administrative lobbies.
- Industrial-grade automated boom barriers for fleet checkpoints.
- Anti-ram rising bollards and full-height turnstiles for critical boundaries.

06 **Clean-Agent Gas Suppression (GSS Novac)**

Waterless extinguishing technology protecting mission-critical IT hardware.

- Leaves zero damaging residue, allowing for immediate operational recovery.
- Safeguards delicate circuit boards, servers, and data center arrays.
- Rapid combustion suppression at the earliest possible stage.

The SITC Lifecycle & Support

We bridge the gap between raw technical blueprints and active field deployment.

Every successful rollout begins with precision. We conduct exhaustive site surveys, formulate exact Bills of Quantities (BOQ), and deliver highly detailed architectural drawings tailored to your compliance requirements.

Strategic Planning & Design

Precision engineering and comprehensive threat evaluation to lay the foundation for impenetrable security architectures.

The success of a multi-site enterprise security rollout is determined long before the first piece of hardware is mounted. A poorly planned network leads to operational blind spots, compliance failures, and budget overruns. At ASSIPL, our Strategic Planning & Design phase ensures that every structural vulnerability is mapped, every hardware node is optimized, and absolute financial transparency is established before deployment begins.

The SITC Execution Framework

Supply: Procurement of certified hardware directly from OEMs.

Installation: Precision physical deployment and structural wiring.

Testing: Rigorous software calibration and diagnostic optimization.

Commissioning: Live power-on validation and formal client handover.

Flexible Annual Maintenance Contracts (AMC)

Protect your long-term capital investments with our proactive maintenance models.

Comprehensive AMC: Total peace of mind. Covers all preventative labor, spare parts, and complete hardware replacements under one fixed annual fee.

Non-Comprehensive AMC: Expert preventative oversight and scheduled health checks, with hardware replacement billed dynamically at actuals.

Engineered for Absolute Accountability

The 4-Phase framework driving our nationwide enterprise integrations.

Strategic Blueprinting

We conduct meticulous threat audits to capture your exact facility vulnerabilities, providing transparent cost estimations before any contract is signed.

Precision Sourcing

Upon project kick-off, we activate our global supply chain, allocating authentic, certified components directly from our manufacturing partners to avoid logistical delays.

Field Execution

Our factory-trained specialists handle device mounting, structured cabling, and rigorous terminal calibration with strict adherence to enterprise safety protocols.

Handover & Continuity

We deliver exhaustive performance reports proving the architecture is optimized, facilitate official project sign-off, and transition seamlessly into your AMC lifecycle.

Automation Systems and Solutions (India) Pvt. Ltd.

Standardize Your Enterprise Security Today.

Connect with our integration experts to discuss your multi-site rollout, vault security, or infrastructure audit.
